第 页

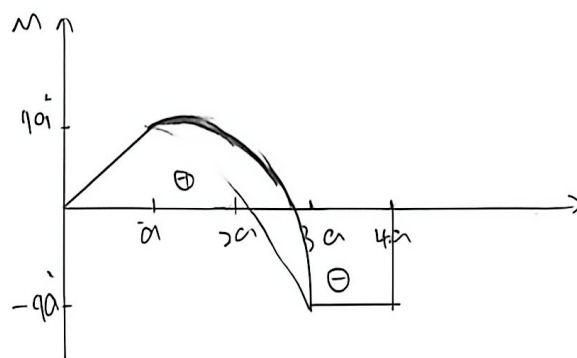

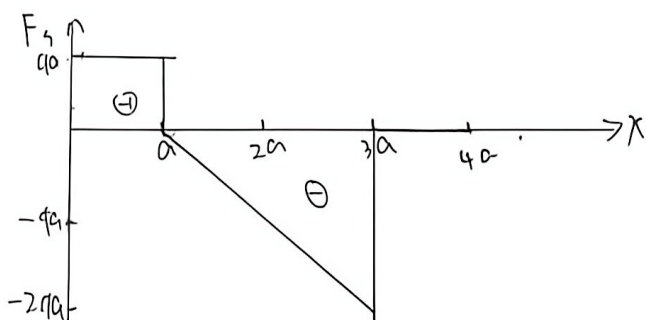

$$5.3(1) \sum M_A = 0 \Rightarrow R_B \cdot 3a - (q \cdot a) \cdot a - [(4-2a) \cdot 2a - (q \cdot a)^2] = 0$$

$$3a R_B = qa^2 + 4qa^2 + qa^2 = 6qa^2 \Rightarrow R_B = 2qa \uparrow$$

$$\sum F_y = 0 \Rightarrow R_A + R_B - qa - 2qa = 0 \Rightarrow R_A = qa \uparrow$$

$$\sum F_x = 0 \Rightarrow R_A + R_B - qa - 2qa = 0 \Rightarrow R_A = qa \uparrow$$

$$(F_s)_{\max} = 2qa \quad (M)_{\max} = qa^2$$

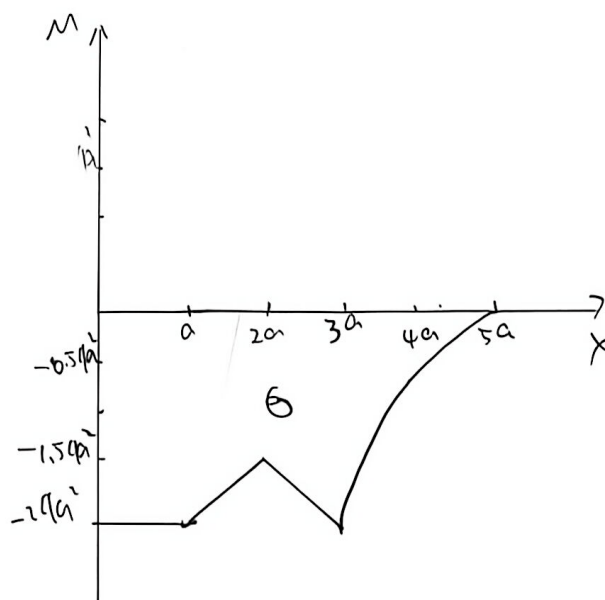

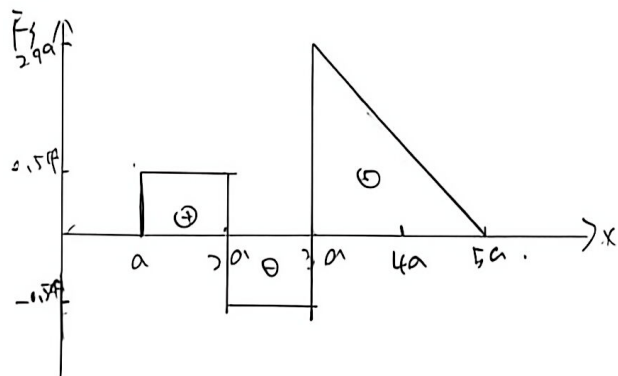

$$5.3(2) \sum M_B = 0 \Rightarrow 2qa^2 - R_A \cdot 2a + (qa \cdot a) - [(4-2a) \cdot a] = 0$$

$$2qa^2 - 2aR_A + qa^2 - 2qa^2 = 0 \Rightarrow 2aR_A = qa^2 \Rightarrow R_A = 0.5qa \uparrow$$

$$\sum F_y = 0 \Rightarrow R_A + R_B - 4a - 2qa = 0 \Rightarrow R_B = 2.5qa \uparrow$$

$$(F_s)_{\max} = 2qa \quad (M)_{\max} = 2qa^2$$
